MAY DAY FLY-BY

25X1D

I. Last year's May Day parade in Moscow featured a single [REDACTED]--the USSR's new four-engine jet heavy bomber. [L.H. B-52]

A. During rehearsals for this year's parade--next Sunday--our observers have seen as many as ten [REDACTED] at a time, flying in formation.

25X1D

B. Sighting of this many means that the Soviet heavy bomber program is substantially more advanced than had been estimated.

C. ^{Previous} ~~Our old~~ estimates held that the USSR would not start series production of these jet heavy bombers until the third quarter of 1955.

II. The Air Force is presently revising these former estimates.

25X1D

A. Range of the [REDACTED] (map), in round-trip flight from Siberian bases (without benefit of "in-flight refueling") covers the continental US in an arc from Santa Barbara to Duluth.

III. Rehearsals for Sunday's air parade have also shown Western observers several other new Soviet planes. Among these are:

A. A four-engine (turbo-prop) swept-wing plane, of heavy bomber size.

1. The Air Force is unable to assess the purpose of the new type until more information is available.

2. Construction of a turbo-prop heavy "bomber" is not expected, since

25X1D

[REDACTED] is already in production and a large high-performance cargo plane (suitable for modification as an aerial tanker), would seem a more urgent Soviet military need. (See chart).

B. A twin jet-engine swept-wing aircraft somewhat larger than a fighter.

1. This is probably a candidate to replace the jet light bomber now flown by tactical and naval elements of the Soviet air establishment. 

25X1C8b

C. At least one jet fighter similar in appearance to the MIG. - *Further development of MIG -*
